

COMMERCIAL CASE STUDY:
DJ Wrights Dairy

DJ Wrights Dairy – Poole

DJ Wright Dairies is one of the few remaining independent family run dairy distribution businesses on the south coast today.

Stemming from a recommendation from a past commercial customer, the installation was completed start to finish in under two weeks (despite very poor November weather conditions).

The Mage safety mounting system guaranteed the integrity of the fixing method to the trapezoidal sheet; and the premium REW modules assured a phenomenal annum output well in to the future.

INVERTER

Owner Richard says ***“From planning to installation the whole process was seamless. At each stage we were provided with all the information and answers we wanted, giving us total confidence.*”**

The installation process was carried out with no disruption to our daily business activities and was completed in two weeks. We look forward to watching our electricity bills being reduced.”
