

Locators goes solar!

As suppliers of low carbon products such as hybrid forklifts and electric vehicles, we are always looking for new ways to improve our green credentials.

Working in partnership with Empower Energy, we have just completed installation of a 46kwp solar energy system at our head office in Ferndown Dorset. The installation, consisting of 171 Mage 270 watt panels, will use 90% of the power generated by this system on site.

Tony Stevens, Customer Service Director for Locators commented:

“As well as improving our carbon footprint, this installation makes sound commercial sense. With guaranteed index linked feed in tariffs for the next twenty years the system provides an excellent return on investment. We are very pleased with the results.”

About Empower Energy

Since 2003 Empower have built an enviable reputation offering a complete range of electrical and renewable energy services including solar energy, energy assessment, renewable heating and plumbing.
